

## FAMILY OF NANOPOWER PUSH-PULL OUTPUT COMPARATORS

### FEATURES

- Low Supply Current . . . 560 nA/Per Channel
- Input Common-Mode Range Exceeds the Rails . . .  $-0.1\text{ V}$  to  $V_{CC} + 5\text{ V}$
- Supply Voltage Range . . . 2.5 V to 16 V
- Reverse Battery Protection Up to 18 V
- Push-Pull CMOS Output Stage
- Specified Temperature Range
  - $0^{\circ}\text{C}$  to  $70^{\circ}\text{C}$  – Commercial Grade
  - $-40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$  – Industrial Grade
- Ultrasmall Packaging
  - 5-Pin SOT-23 (TLV3701)
  - 8-Pin MSOP (TLV3702)
- Universal Op-Amp EVM (Reference SLOU060 for more information)

All members are available in PDIP and SOIC with the singles in the small SOT-23 package, duals in the MSOP, and quads in the TSSOP package.

SUPPLY CURRENT  
vs  
SUPPLY VOLTAGE

### APPLICATIONS

- Portable Battery Monitoring
- Consumer Medical Electronics
- Security Detection Systems

### DESCRIPTION

The TLV370x is Texas Instruments' first family of nanopower comparators with only 560 nA per channel supply current, which make this device ideal for battery power and wireless handset applications.

The TLV370x has a minimum operating supply voltage of 2.7 V over the extended industrial temperature range ( $T_A = -40^{\circ}\text{C}$  to  $125^{\circ}\text{C}$ ), while having an input common-mode range of  $-0.1$  to  $V_{CC} + 5\text{ V}$ . The low supply current makes it an ideal choice for battery powered portable applications where quiescent current is the primary concern. Reverse battery protection guards the amplifier from an over-current condition due to improper battery installation. For harsh environments, the inputs can be taken 5 V above the positive supply rail without damage to the device.

### high side voltage sense circuit

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

| Maximum junction temperature, T <sub>J</sub>                    | 150°C                        |
| Storage temperature range, T <sub>stg</sub>                     | -65°C to 150°C               |
| Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds    | 260°C                        |

† Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES: 1. All voltage values, except differential voltages, are with respect to GND.  
 2. Input voltage range is limited to 20 V max or V<sub>CC</sub> + 5 V, whichever is smaller.

power supply

| PARAMETER |                              | TEST CONDITIONS                          | $T_A$ †                               | MIN        | TYP | MAX  | UNIT |
|-----------|------------------------------|--|---------------------------------------|------------|-----|------|------|
| $I_{CC}$  | Supply current (per channel) | Output state high                        | 25°C                                  |            | 560 | 800  | nA   |
|           |                              |  | Full range                            |            |     | 1000 |      |
| PSRR      | Power supply rejection ratio | $V_{IC} = V_{CC}/2\text{ V},$<br>No load | $V_{CC} = 2.7\text{ V to }5\text{ V}$ | 25°C       | 75  | 100  | dB   |
|           |                              |  |                                       | Full range | 70  |      |      |
|           |                              |  | $V_{CC} = 5\text{ V to }15\text{ V}$  | 25°C       | 85  | 105  |      |
|           |                              |  |                                       | Full range | 80  |      |      |

† Full range is 0°C to 70°C for C suffix and -40°C to 125°C for I suffix. If not specified, full range is -40°C to 125°C.

switching characteristics at recommended operating conditions,  $V_{CC} = 2.7\text{ V}, 5\text{ V}, 15\text{ V}, T_A = 25^\circ\text{C}$  (unless otherwise noted)

| PARAMETER   |  | TEST CONDITIONS   | MIN               | TYP | MAX | UNIT          |
|-------------|--|---|-------------------|-----|-----|---------------|
| $t_{(PLH)}$ | Propagation response time, low-to-high-level output (see Note 3) | $f = 10\text{ kHz},$<br>$V_{STEP} = 100\text{ mV},$<br>$C_L = 10\text{ pF},$<br>$V_{CC} = 2.7\text{ V}$ | Overdrive = 2 mV  | 240 |     | $\mu\text{s}$ |
|             |  |   | Overdrive = 10 mV | 64  |     |               |
|             |  |   | Overdrive = 50 mV | 36  |     |               |
| $t_{(PHL)}$ | Propagation response time, high-to-low-level output (see Note 3) |   | Overdrive = 2 mV  | 167 |     |               |
|             |  |   | Overdrive = 10 mV | 67  |     |               |
|             |  |   | Overdrive = 50 mV | 37  |     |               |
| $t_r$       | Rise time  | $C_L = 10\text{ pF}, V_{CC} = 2.7\text{ V}$   |                   | 7   |     | $\mu\text{s}$ |
| $t_f$       | Fall time  | $C_L = 10\text{ pF}, V_{CC} = 2.7\text{ V}$   |                   | 9   |     | $\mu\text{s}$ |

NOTE 3: The response time specified is the interval between the input step function and the instant when the output crosses 1.4 V. Propagation responses are longer at higher supply voltages, refer to Figures 12–17 for further details.

### TYPICAL CHARACTERISTICS

## IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgment, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Customers are responsible for their applications using TI components.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, license, warranty or endorsement thereof.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations and notices. Representation or reproduction of this information with alteration voids all warranties provided for an associated TI product or service, is an unfair and deceptive business practice, and TI is not responsible nor liable for any such use.

Resale of TI's products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service, is an unfair and deceptive business practice, and TI is not responsible nor liable for any such use.
